Lesson 1, Week 6

Reading Quiz

What is up in Space?

Enjoy learning about space and then complete the quiz at the end. Can you be an excellent Rex Retriever and find the answers in the text?

What is up in the sky?

Click each image from left to right to find out!

What is a solar system?

A solar system is a group of planets and moons that all travel around a sun.

Our solar system was formed around 4.6 billion years ago.

There are eight planets in our solar system.

For many years, humans did not know about the solar system and thought that the Earth was the centre of the universe.

Neptune is the furthest from the Sun. It is also the coldest planet.

What is the Moon?

The Moon is made of rock (not cheese!).

The Moon is a 'natural satellite', which means it has always been there.

The Moon travels around the Earth.

It takes around 28 days for the Moon to travel around the Earth.

The Moon is around 4.5 billion years old.

How big are the planets?

Space Quiz!

Can you launch the rocket by answering these questions correctly?

Question 1

What is the name of the planet that we live on?

Mercury

Saturn

Earth

Question 2

What is at the centre of our solar system?

The Earth

The Sun

The
Moon

Question 3

Which planet is nearest to the Sun?

Mercury

Mars

Neptune

Question 4

What orbits (travels around) our Earth?

The Sun

The
Moon

Jupiter

Question 5

What can you see 'twinkling' at night?

Asteroids

The Sun

Stars

Well done for learning the facts and
answering all the questions.

We will use these facts in our writing
this week.
