

## Aims of this session:

- Understand ks1 maths curriculum/content
- Addition and Subtraction
- Multiplication and division

# Maths Curriculum

- Develop fluency

Number fluency - knowing and recalling facts.

Procedural fluency - knowing which method is needed when solving calculations and the ability to apply knowledge to solving problems and different contexts.

- Encourage mathematical reasoning: e.g., the children are asked to describe, explain, justify and prove their ideas and solutions.
- Children develop their problem solving skills in a variety of contexts and learn to apply their knowledge with increasing accuracy.

## Number: number and place value

### Year 1

- Count to and across 100, forwards and backwards, from any given number
- Count in multiples of twos, fives and tens
- Identify one more and one less
- Identify and represent numbers using objects and visual representations
- Use the following language: 'equal to', 'more than', 'less than', 'most' and 'least'

### Year 2

- Count in steps of 2, 3 and 5 from 0, and in 10s from any number, forward and backwards
- Recognise the place value of each digit in a two-digit number
- Compare and order numbers from 0 to 100, using  $<$ ,  $>$  and  $=$  signs
- Use place value and number facts to solve problems

## Number: addition and subtraction

060

## Addition and subtraction

### Year 1

- Read and write number sentences
- Represent and use number bonds and subtraction facts within 20
- Add and subtract one-digit and two-digit numbers to 20, including zero
- Solve one-step problems that involve addition and subtraction, using objects and pictorial representations<sup>[SEP]</sup>

### Year 2

- Use concrete objects and pictorial representations
- Recall and use addition and subtraction facts to 20, and use related facts up to 100<sup>[SEP]</sup>

Add and subtract numbers using concrete objects, pictorial representations and mentally, including:

- a two-digit number and ones
- a two-digit number and tens
- two two-digit numbers
- adding three one-digit numbers

## Number: multiplication and division

### Year 1

- Solve one-step problems involving multiplication and division by calculating the answer using concrete objects, pictorial representations and arrays<sup>[L]</sup><sub>[SEP]</sub>

### Year 2

- Recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers
- Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the  $\times$ ,  $\div$  and  $=$  signs
- Solve problems involving multiplication and division, using arrays, repeated addition, mental methods, and multiplication and division facts

# Number: fractions

## Year 1

- Recognise, find and name a half as one of two equal parts of an object, shape or quantity
- Recognise, find and name a quarter as one of four equal parts of an object, shape or quantity

## Year 2

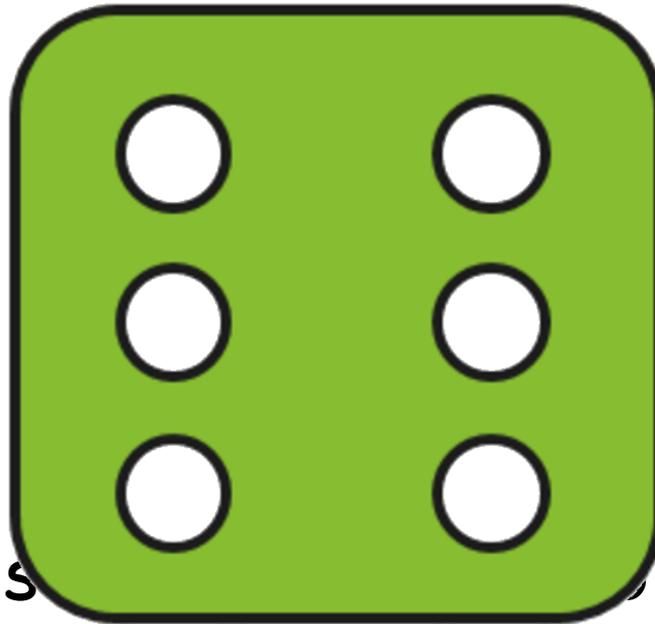

- Recognise, find, name and write fractions  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{1}{2}$  and  $\frac{3}{4}$  of a length, shape, set of objects or quantity
- Write simple fractions and recognise the equivalence of  $\frac{2}{4}$  and  $\frac{1}{2}$

# Addition and Subtraction

# Subitising

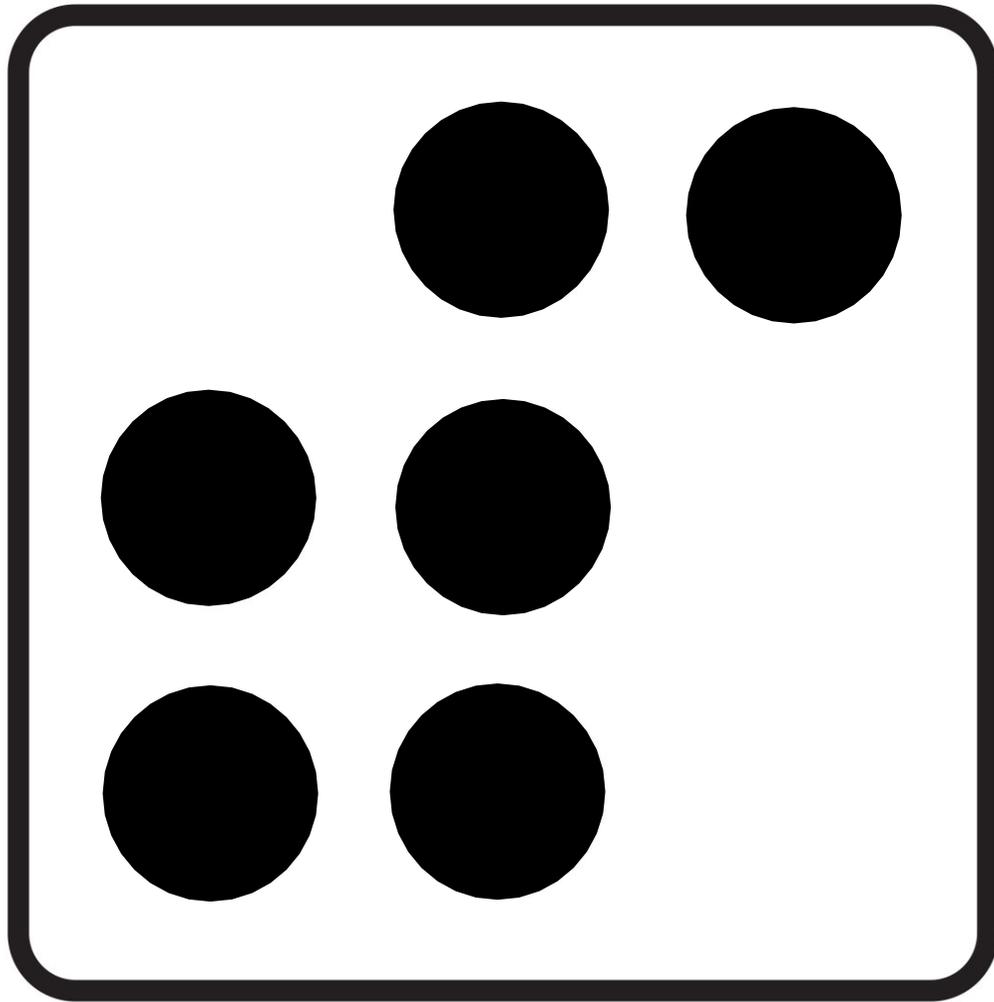

Subitising is when you realise how many there are without counting. This is where you are able to recognise a number by grouping in into small sets.

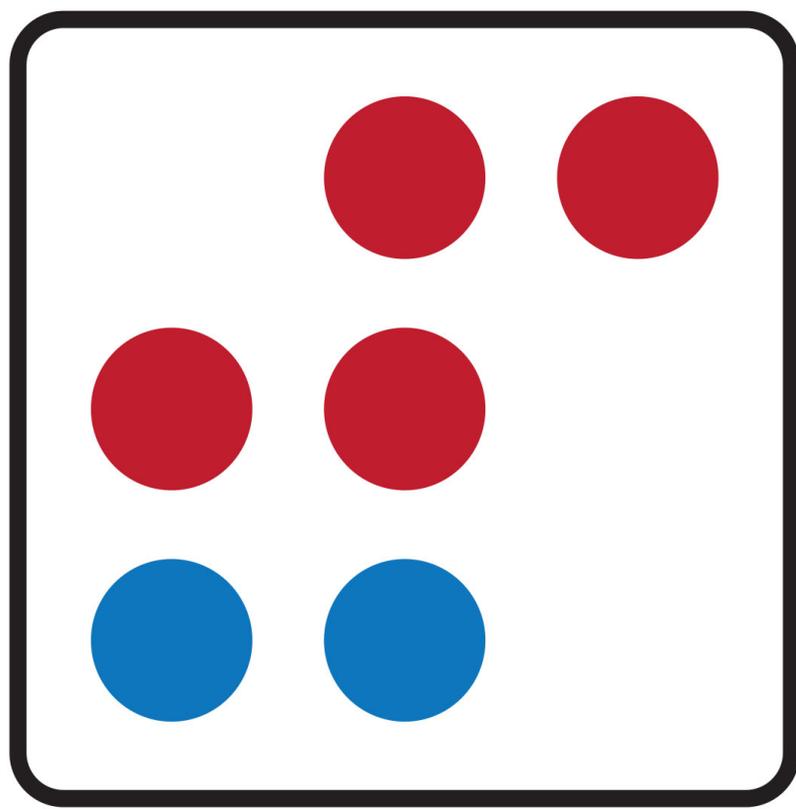

For example, if you are shown six black dots, it's likely that you will automatically group these into 2 groups of 3, and then know that there are 6 in total without actually counting each one.

What number can you see?

How did you know automatically?

 teachstarter

Stem sentences are used to develop understanding.

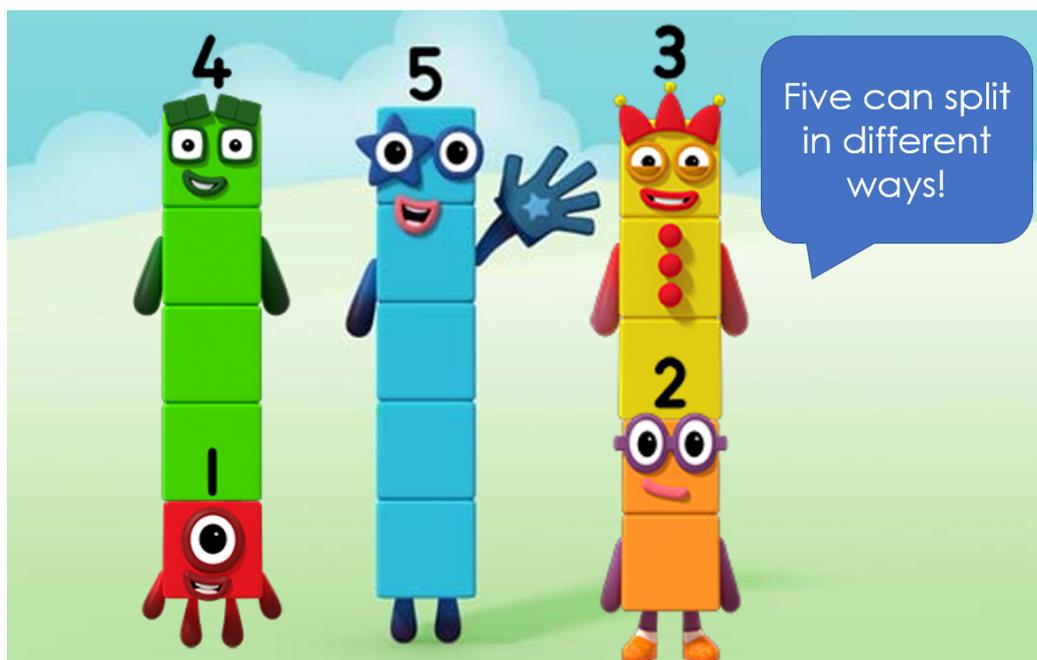

6 is made of 4 and 2  
4 and 2 make 6

3 needs 3 to  
make 6

We also explore representing numbers in different ways?

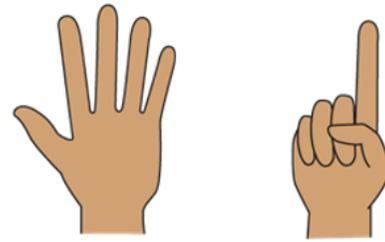

5 dice pattern

blocks

# Frames

e.g., tens frame

				
				

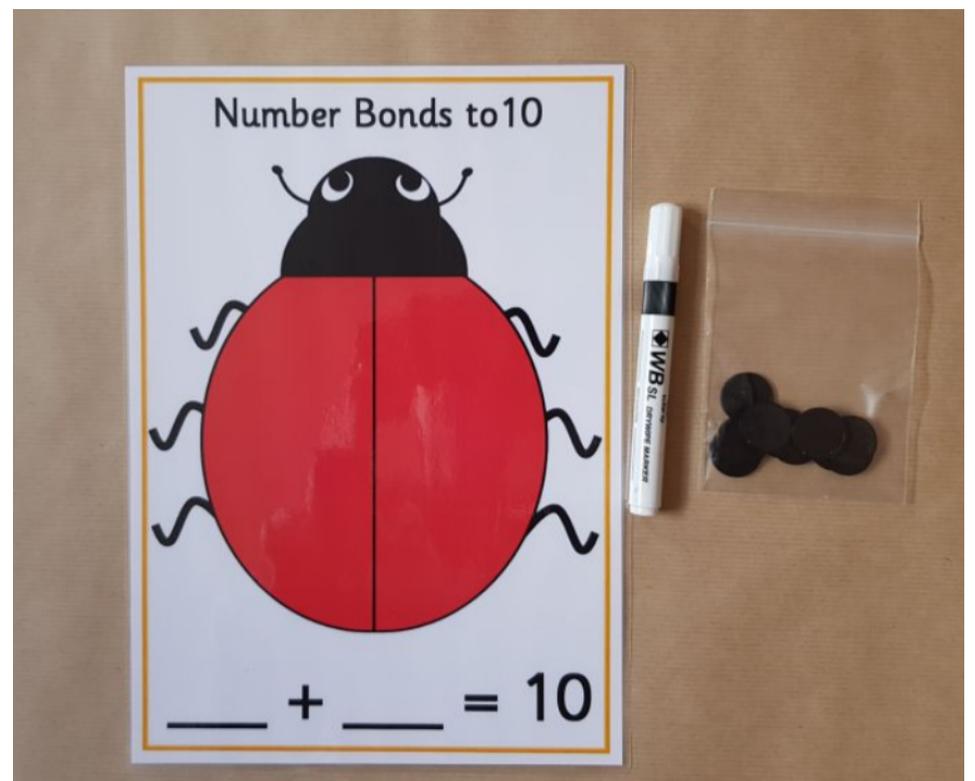

5 needs \_\_\_\_ to make \_\_\_\_.

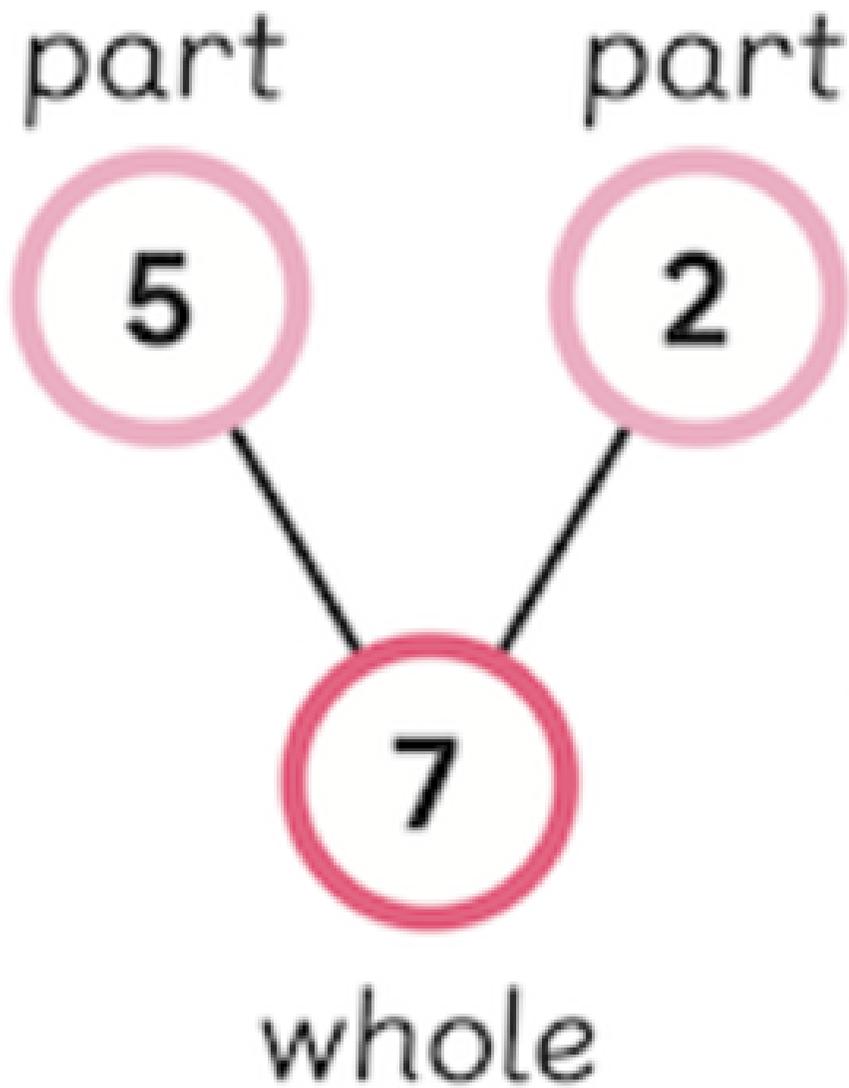

# Rekenrek

Practical  
representations

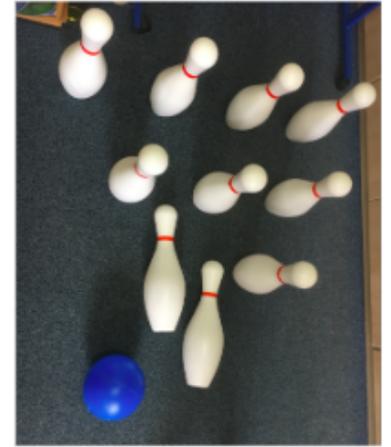

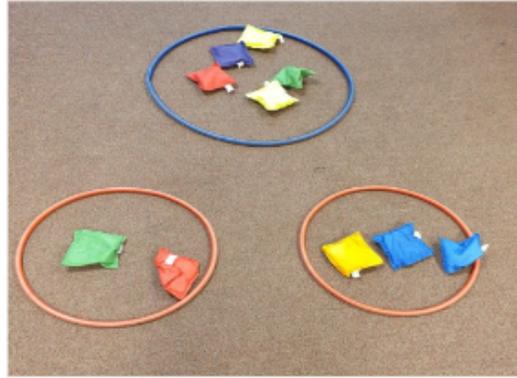

# Whole part part model

\_\_\_\_\_ is a part

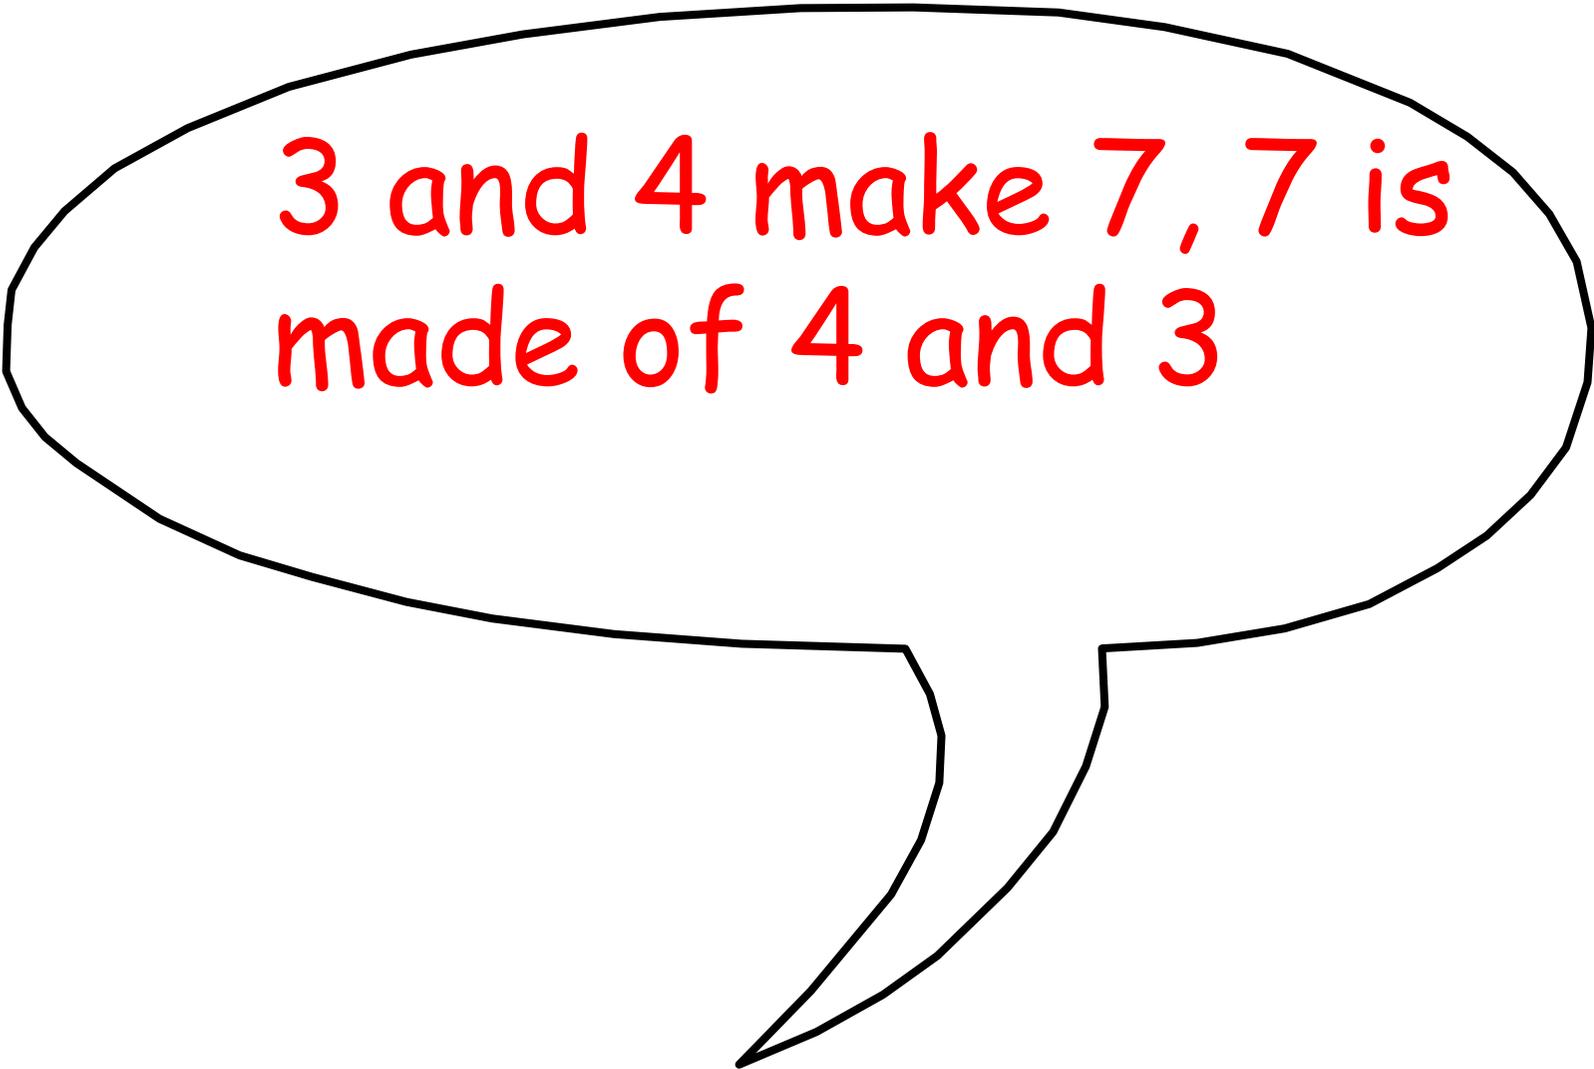

\_\_\_\_\_ is a part

The whole is \_\_\_\_\_

Some school activities could be used in the home.

addition is commutative

3 and 4 make 7, 7 is  
made of 4 and 3

# Practical things to do at home:

Get creative (see previous slide)

Use a timer: How many number bonds to 8 can you think of?

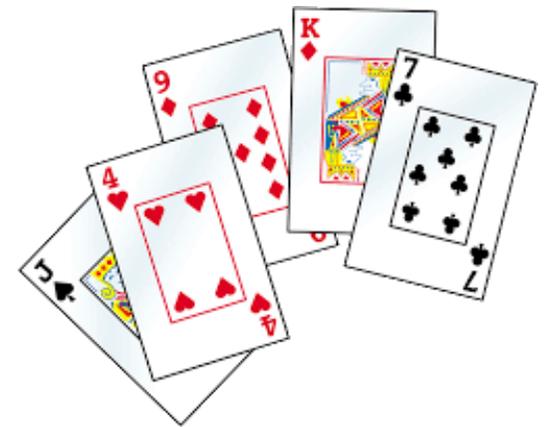

Use a pack of cards:

-find pairs of cards up to a given total.

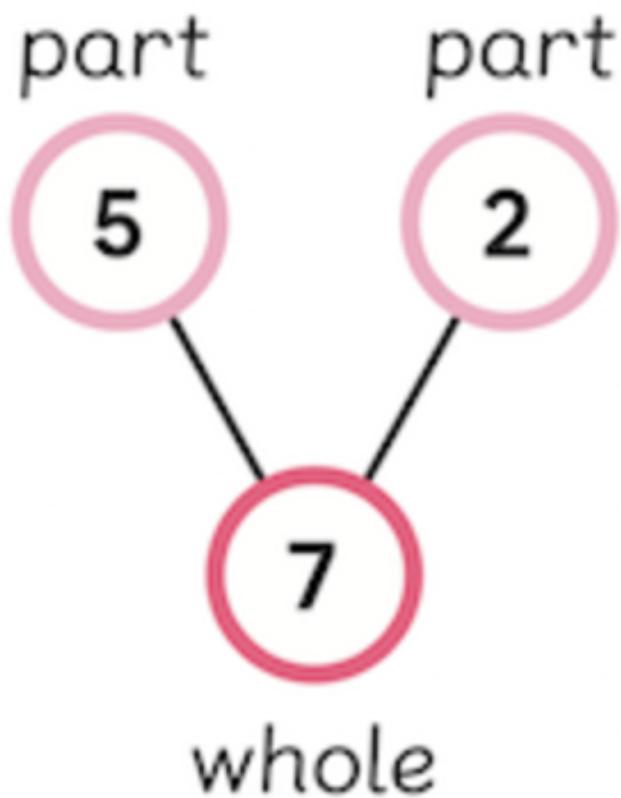

- play number bond snap.

-Use money: I have 10p coins.

How many am I hiding?

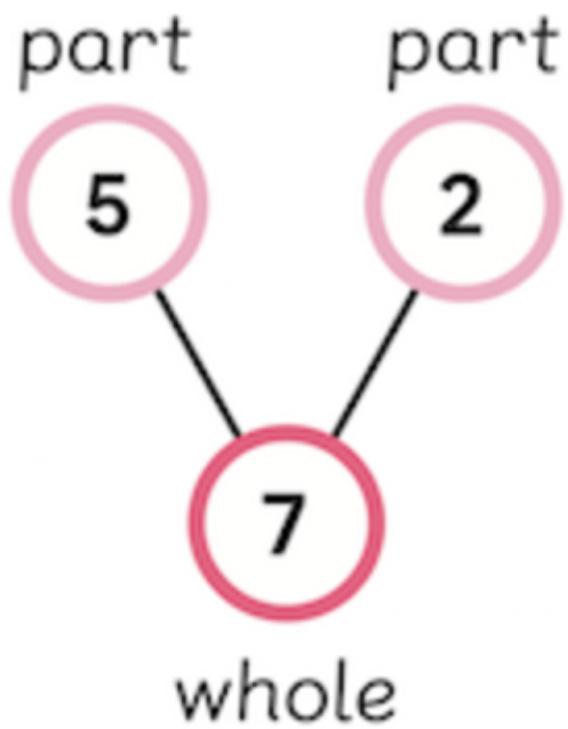

# Fact families

$$5 - 2 = 3$$

so

$$3 + 2 = 5$$

$$7 - 2 = 5$$
$$5 + 2 = 7$$
$$7 - 5 = 2$$
$$2 + 5 = 7$$

$$2 = 7 - 5$$
$$5 = 7 - 2$$
$$7 = 5 + 2$$
$$7 = 2 + 5$$

# Number bonds to 20

$$13 + 4 = \underline{\quad}$$

$$3 + 4 = 7$$

$$13 + 4 = 17$$

$$18 - 4 = \underline{\quad}$$

$$8 - 4 = 4$$

$$18 - 4 = 14$$

$$30 + 40 = 70$$

$$60 - 20 = 40$$

## Developing number bond strategies

$$8 + 6 =$$

$$8 + 2 + 4 = 14$$

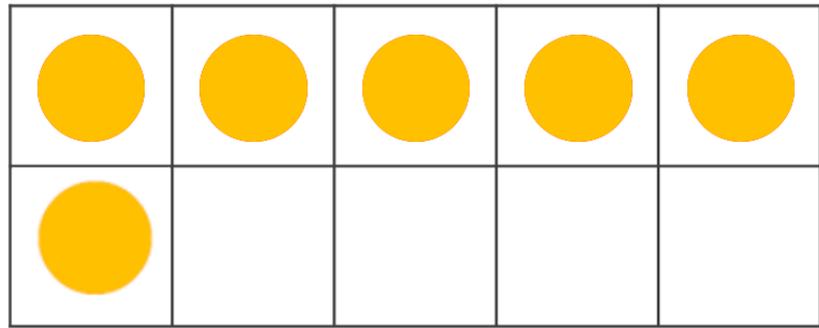

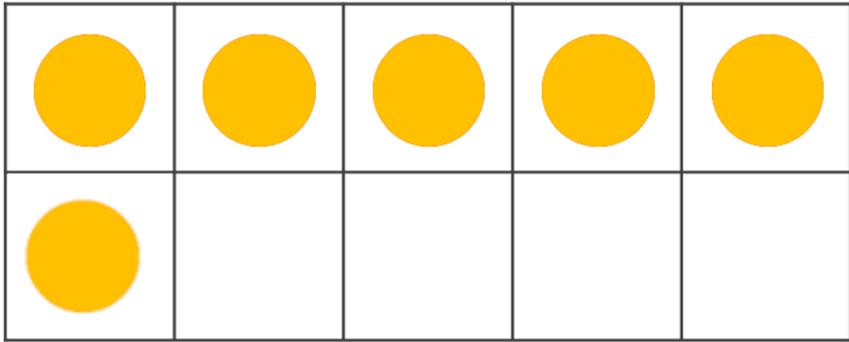

$$13 - 6 =$$

$$13 - 3 - 3 = 7$$

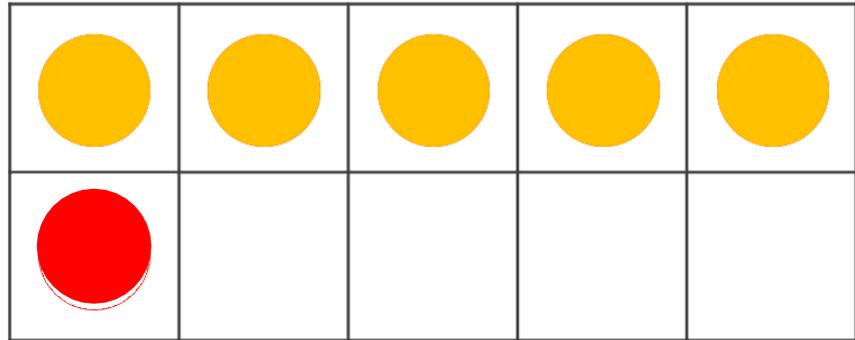

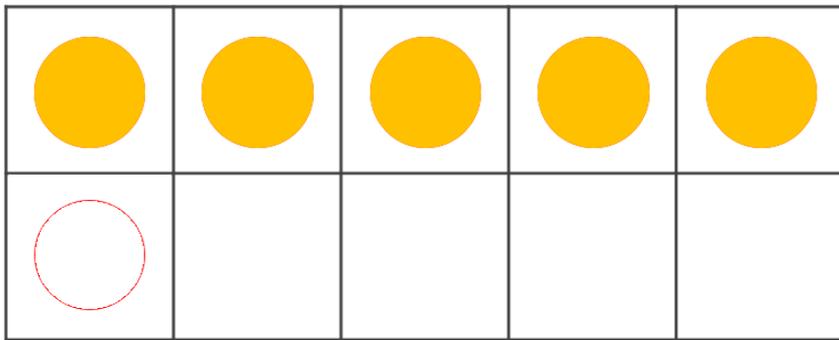

$$45 + 36 =$$

$$92 - 24 =$$

# Doubles

# Near doubles

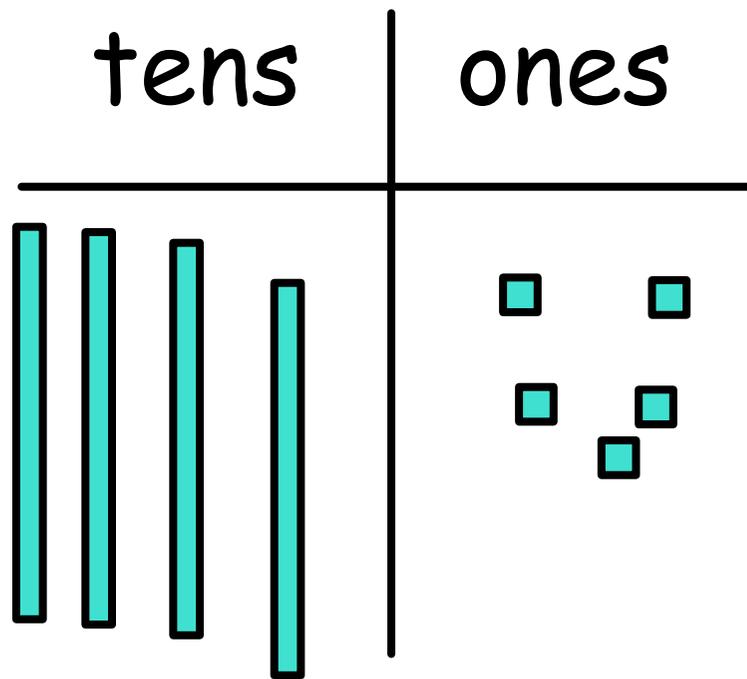

$5 + 6$  is equal to 5 doubled (10) plus 1 (11)

# Tens and Ones

Partition:  $45 = 40 + 5$

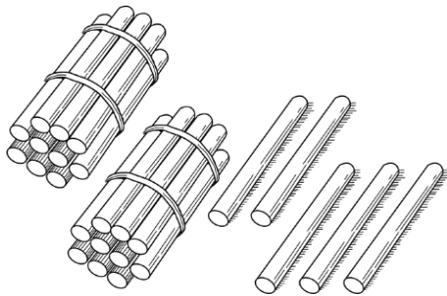

Place value:  
(digit)

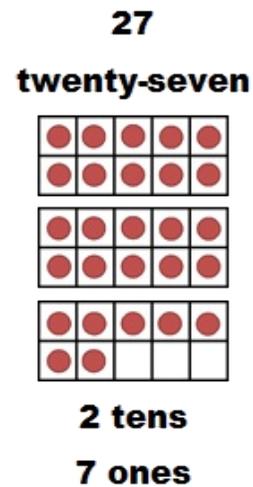

45 has 4 tens and 5 ones

We use a variety of resources and spend time exploring tens and ones in a number.

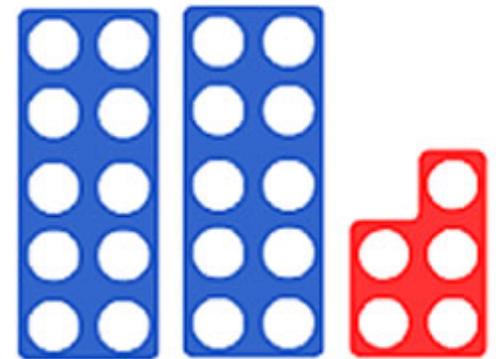

bundles of straws

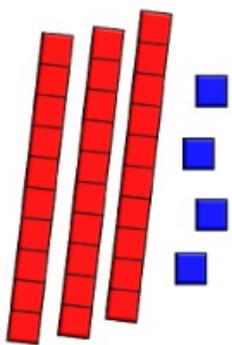

tens frames

Numicon

Dienes

money

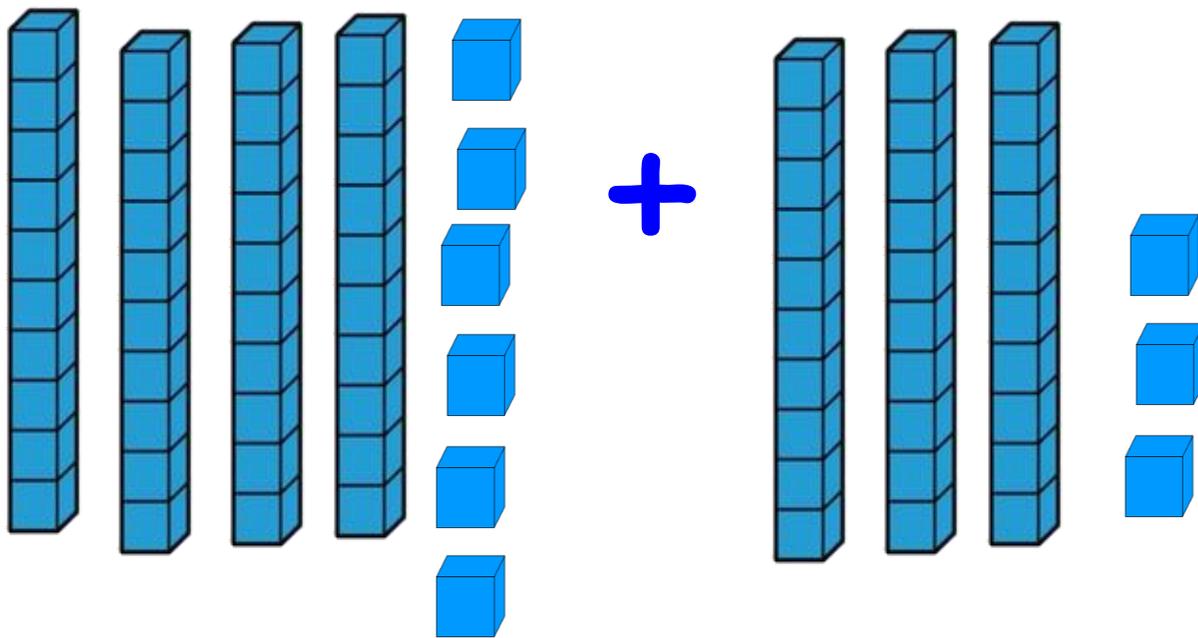

place value counters

Tens	One
10 10	1 1 1

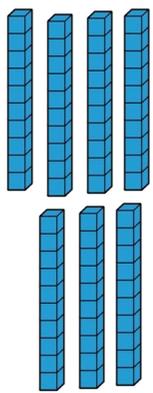

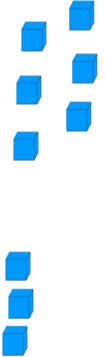

# Deines - Addition

(Different resources can be used to represent tens and ones)

$$46 + 33 =$$

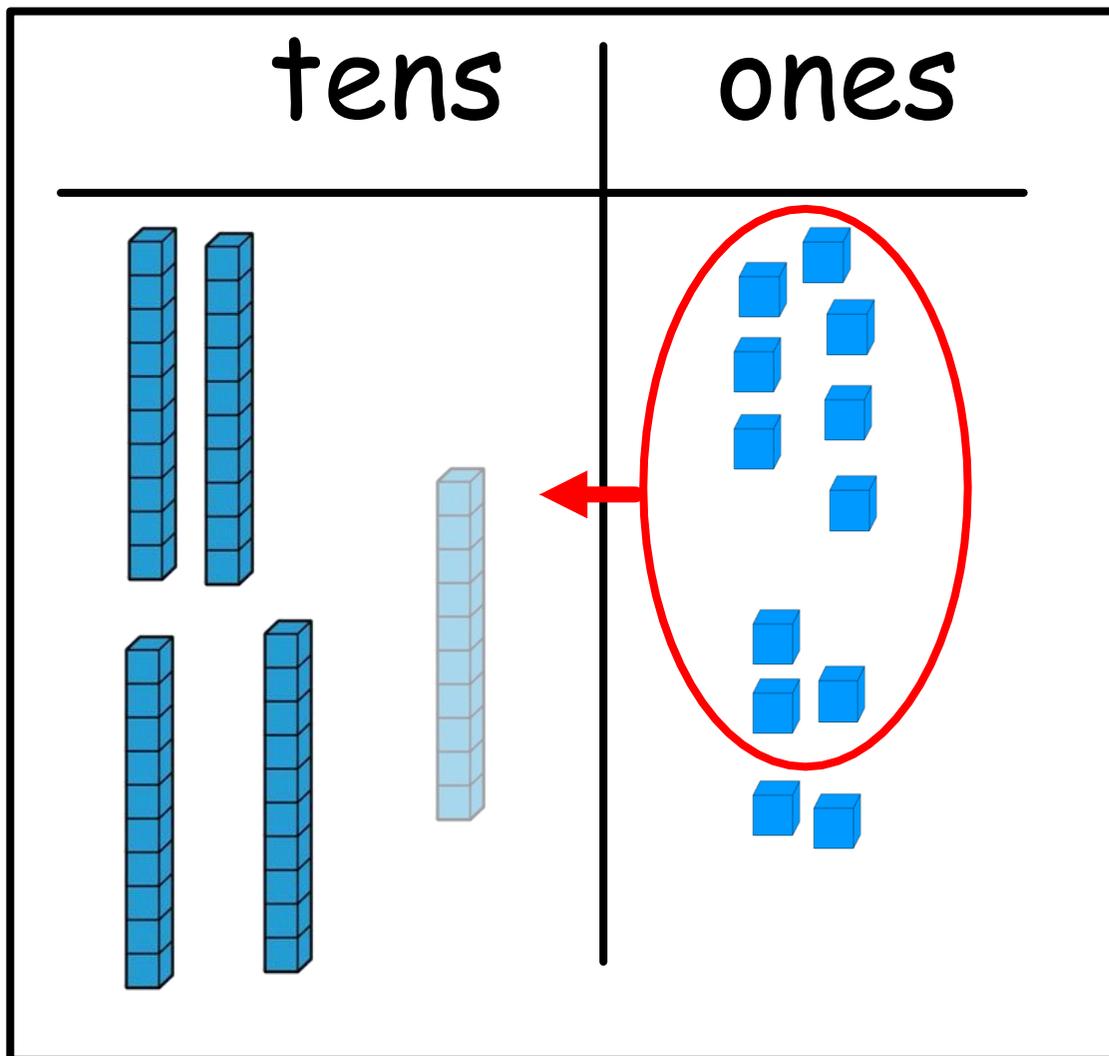

Prepare for  
column addition

tens	ones
	

# Deines - Addition/regrouping

$$27 + 25 =$$

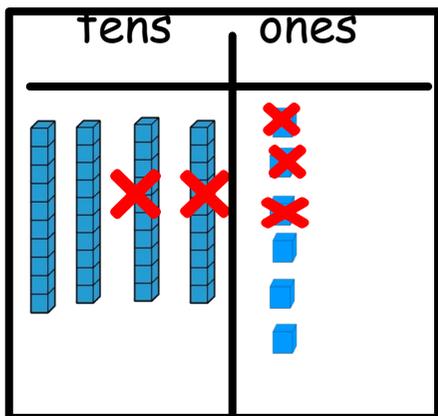

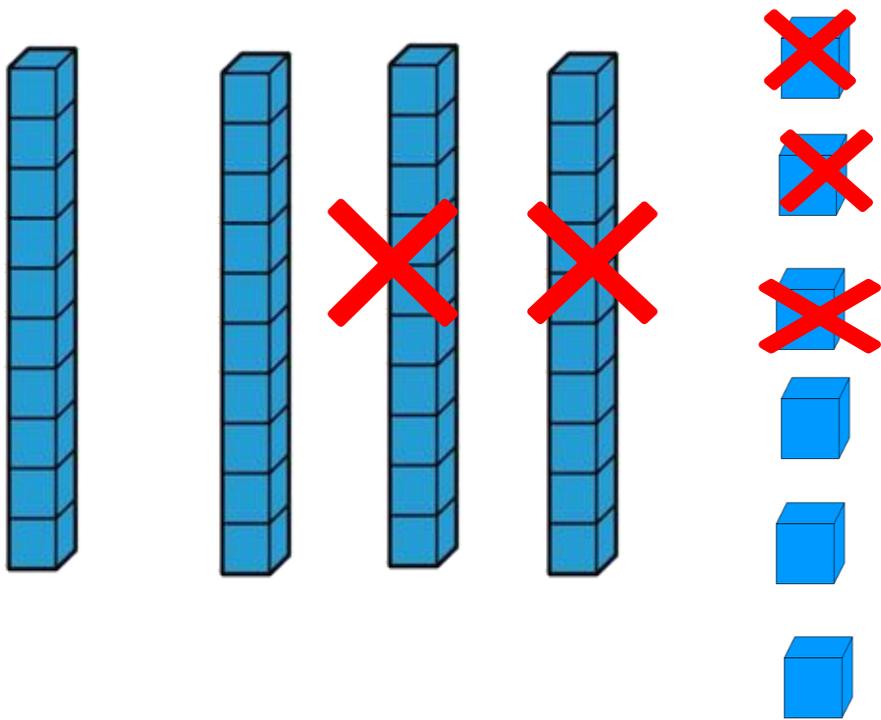

Children learn that when there are more than 10 ones they have to regroup 10 ones into a tens.

Children learn to represent this using pictures.

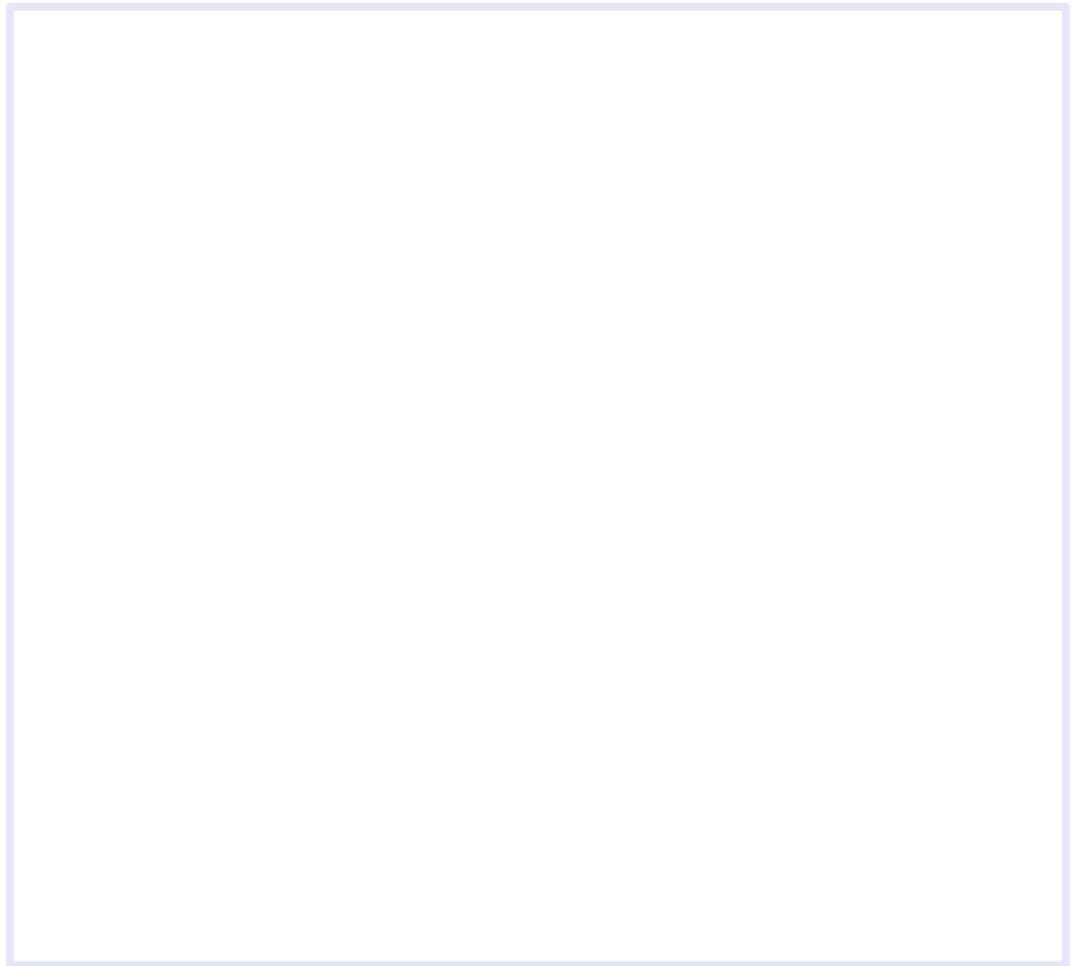

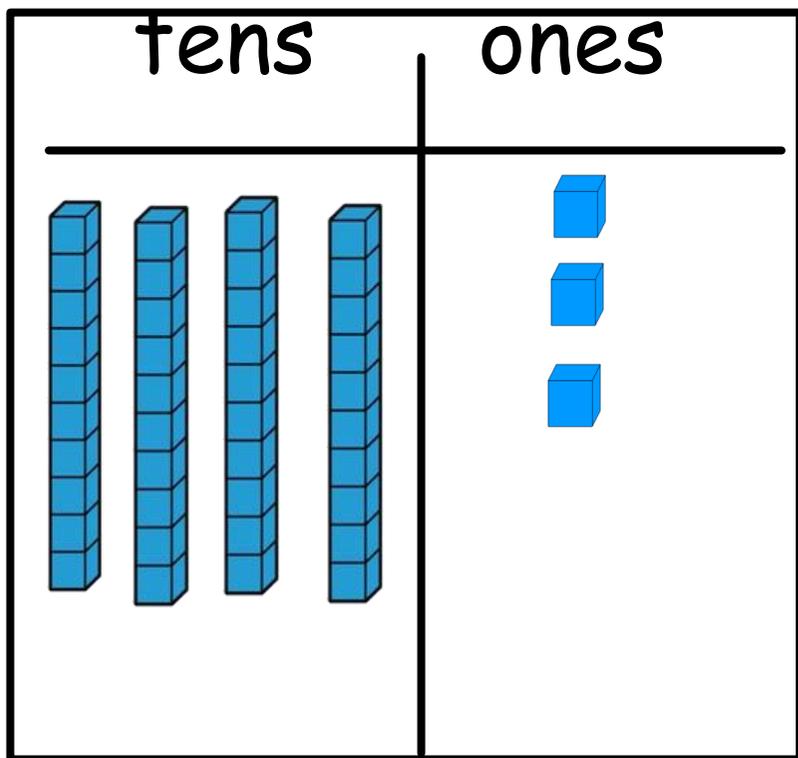

# Deines - Subtraction

$$46 - 23 =$$

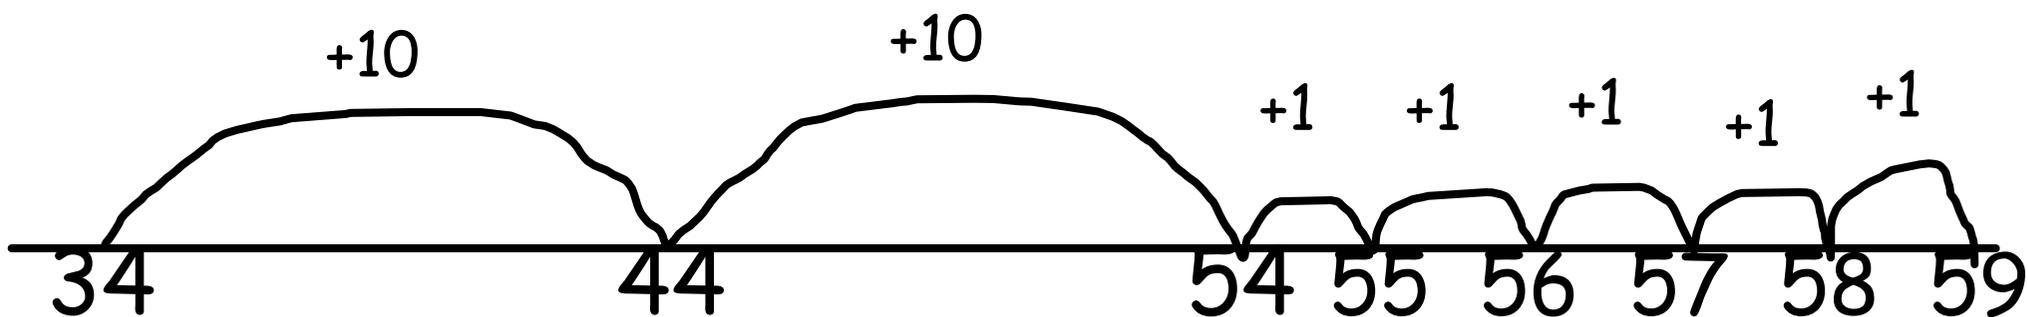

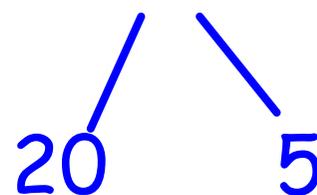

# Deines - exchanging

$$43 - 26 =$$

Empty  
number line

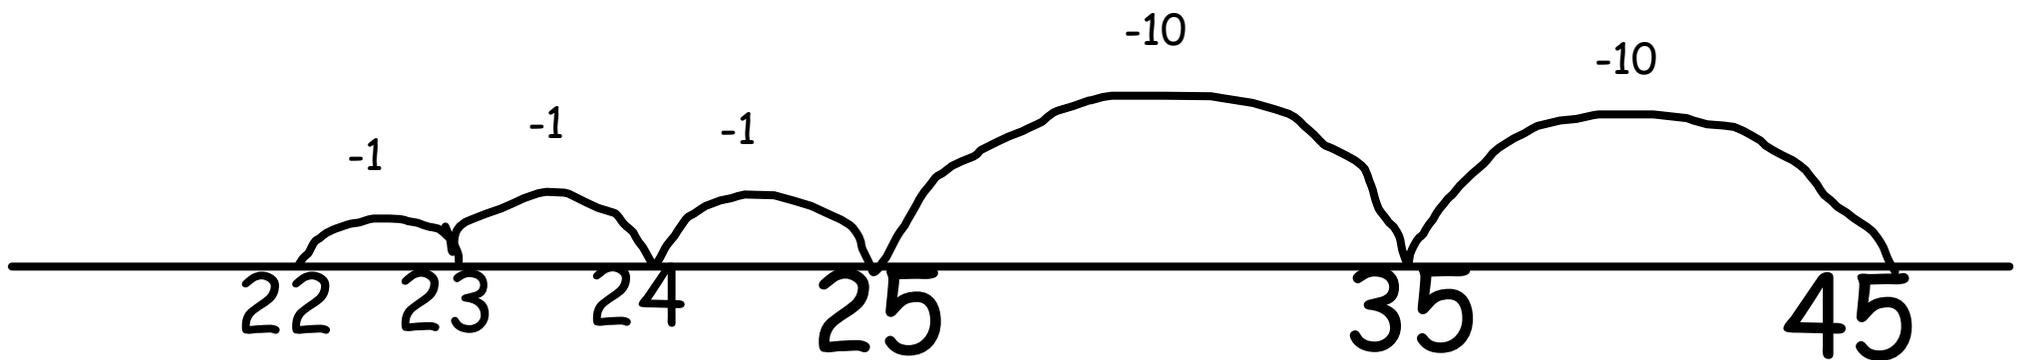

$$34 + 25 =$$

Empty  
number line

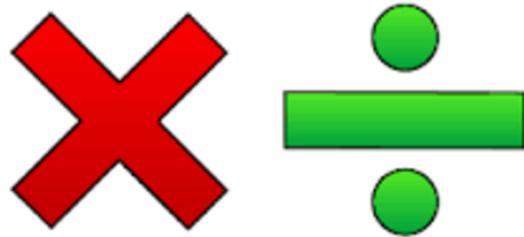

$$45 - 23 =$$

$$\begin{array}{r} 20 \\ 3 \end{array}$$

Aim - efficient methods

# Multiplication and Division

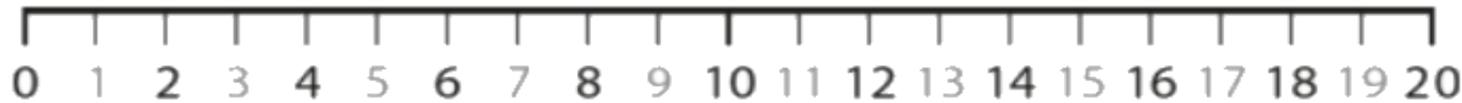

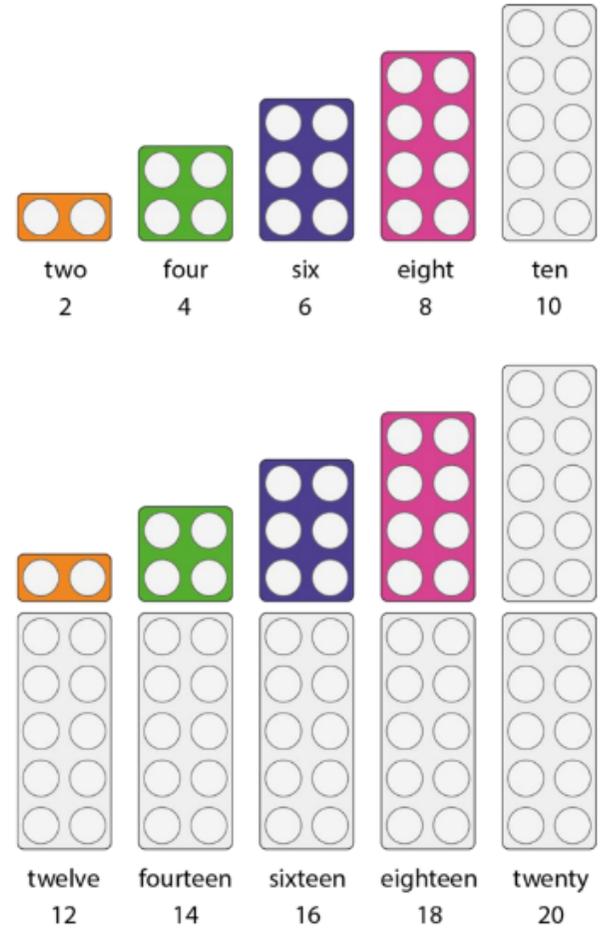

**MULTIPLICATION**

**DIVISION**

# Skip Counting

Different representations are used to deepen understanding.

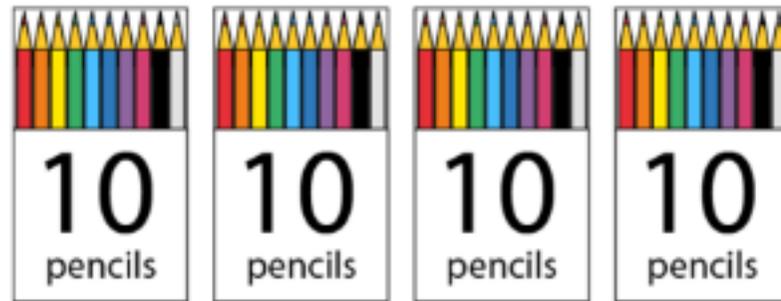

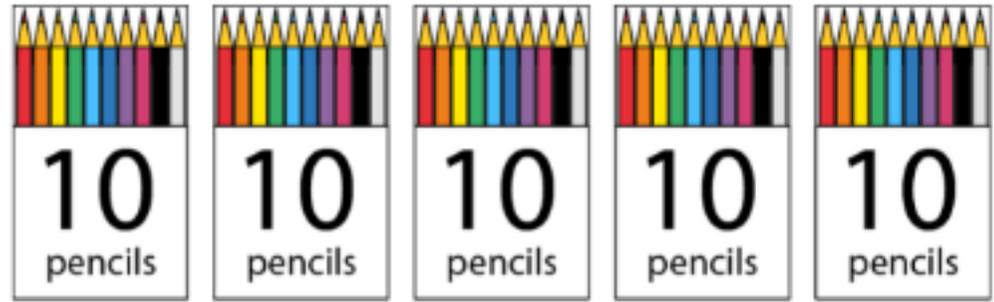

Gattegno chart:

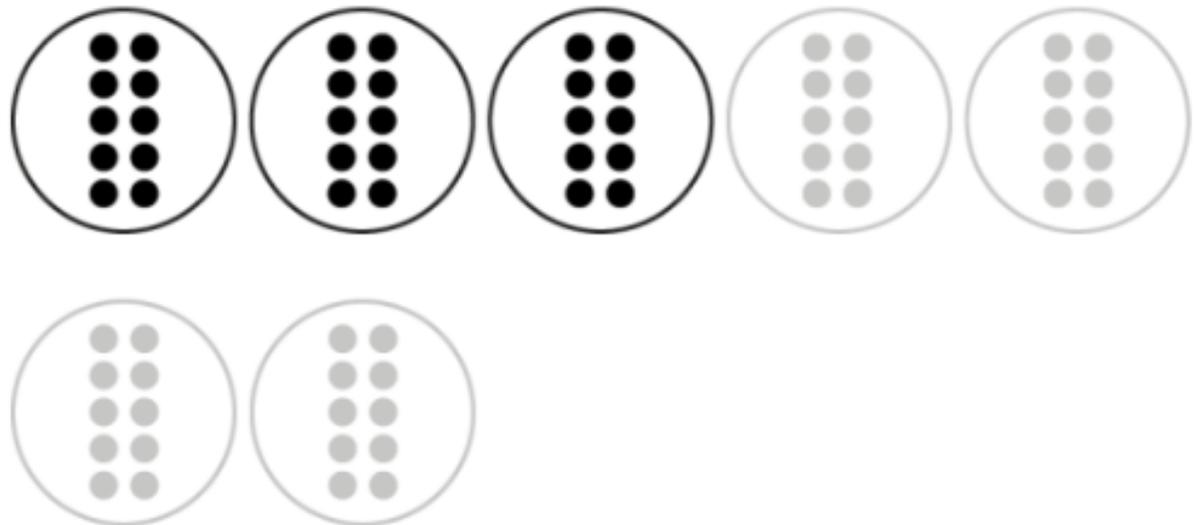

1000	2000	3000	4000	5000	6000	7000	8000	9000
100	200	300	400	500	600	700	800	900
10	20	30	40	50	60	70	80	90
1	2	3	4	5	6	7	8	9

Skip counting is linked to real life contexts (problem solving)

*'How many pencils are there? Count in groups of ten.'*

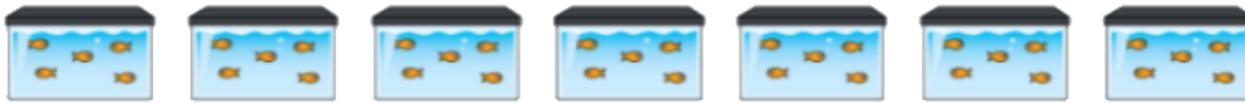

Children count in different ways. This develops understanding and has clear links to future division and multiplication learning.

- *'Three groups of ten, four groups of ten, five groups of ten...'*
- *'Three tens, four tens, five tens...'*
- *'Thirty, forty, fifty...'*

# Linking skip counting to repeated addition and then ultimately multiplication

How many fish are there?

There are \_\_\_ fish in each tank.

There are \_\_\_ tanks.

There are \_\_\_ fish altogether.

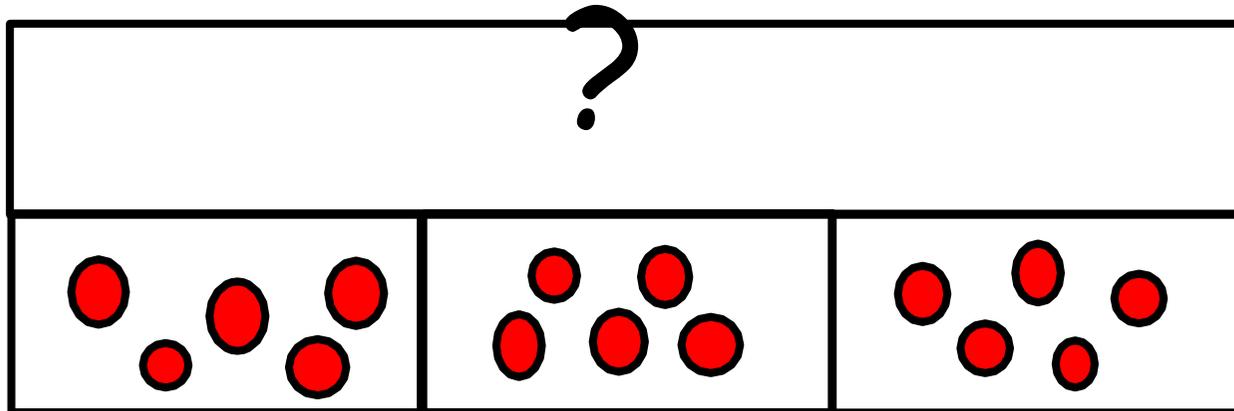

- 5, 10, 15, 20, 25, 30, 35.
- $5+5+5+5+5+5+5= 30$
- 7 fives are 35
- There are 35 fish altogether.

Not in all one lesson!

$$\text{Year 2 : } 7 \times 5 = 35$$

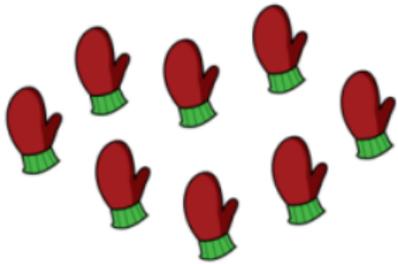

Bar model (year 2)

$$3 \times 5 = \underline{\quad}$$

# Division (grouping)

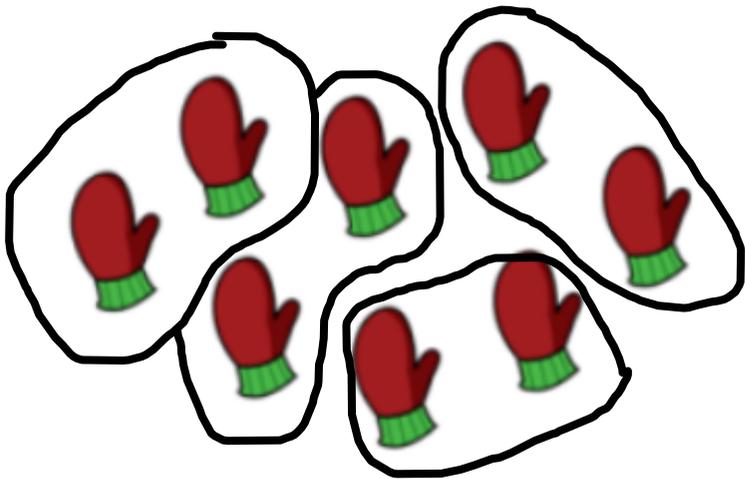

How many equal groups of 2 can you make with the mittens?

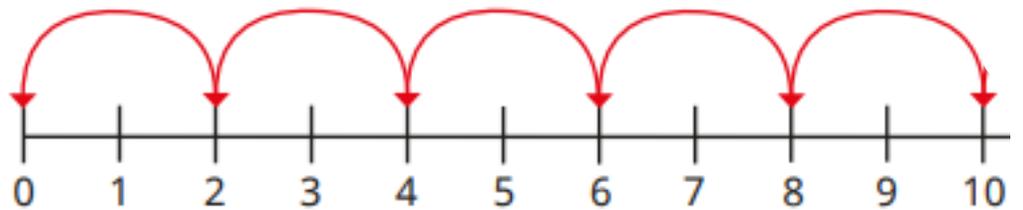

There are \_\_\_\_ groups of 2 mittens.

If you had 10 mittens, how many equal groups of 2 mittens could you make?

Year 1

Year 2

$$10 \div 2 = 5$$

# Division - sharing

Share 12 cubes equally between 4 boxes.

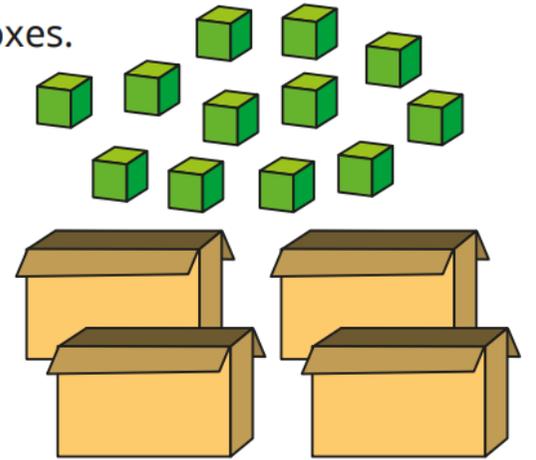

Complete the sentences.

There are \_\_\_\_\_ cubes altogether.

There are \_\_\_\_\_ boxes.

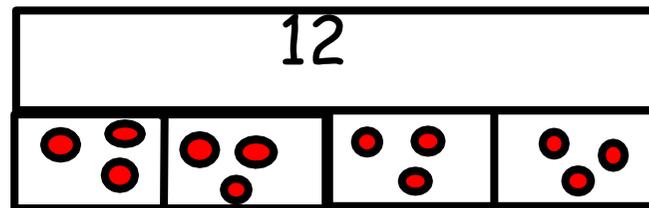

There are \_\_\_\_\_ cubes in each box.

$12 \div \underline{\quad} = \underline{\quad}$

Year 1  
practical/problems

Year 2  
introduce

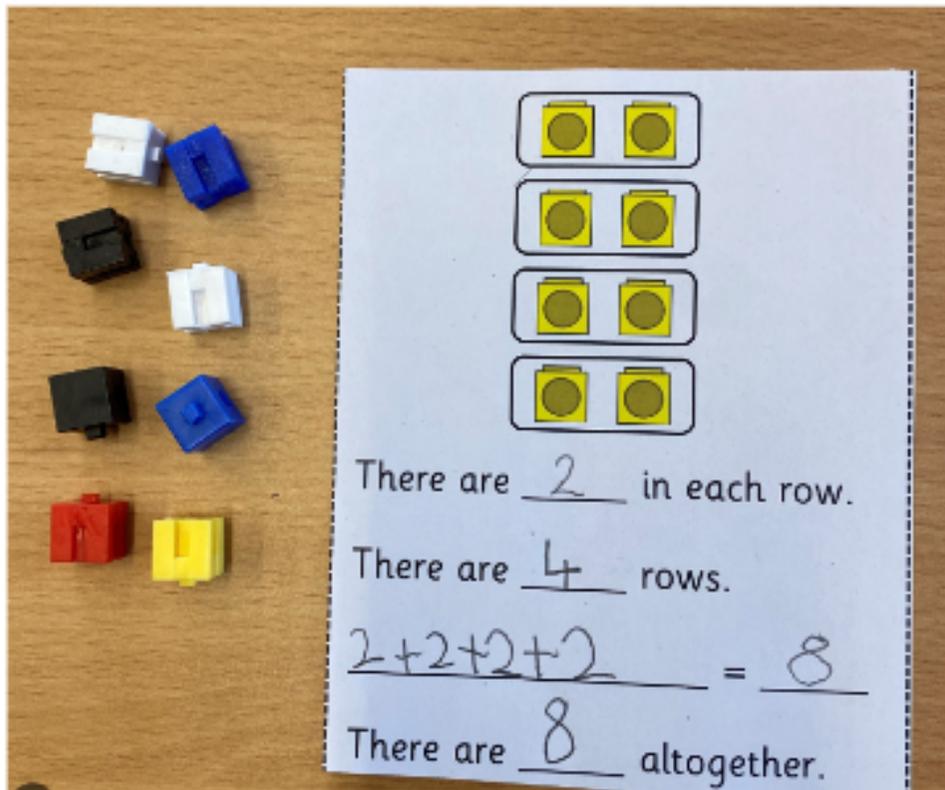

bar model

# Arrays

Children notice patterns, recognise equal groups and develop their ability to count in steps of 2 5 and 10.

Year 1

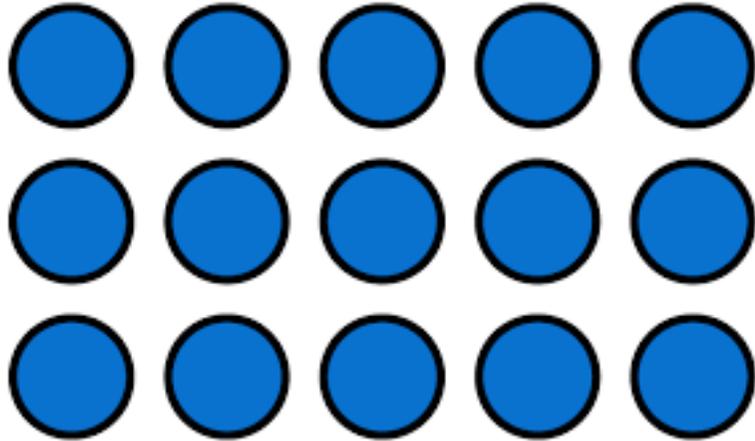

Year 2

x sign introduced.  
2 facts e.g.  
 $2 \times 4 = 4 \times 2$

Arrays - linking division and multiplication

$$3 \times 5 = 15$$

$$15 \div 3 = 5$$

$$5 \times 3 = 15$$

$$15 \div 5 = 3$$

# Practical things to do at home:

Involve the children e.g.

How many packets will we need?

How many have we in total?

How many can each person get?

Will we have enough if we buy 3 packets?

*Please take a few minutes to complete the questionnaire.*
