

Maths Day 2023

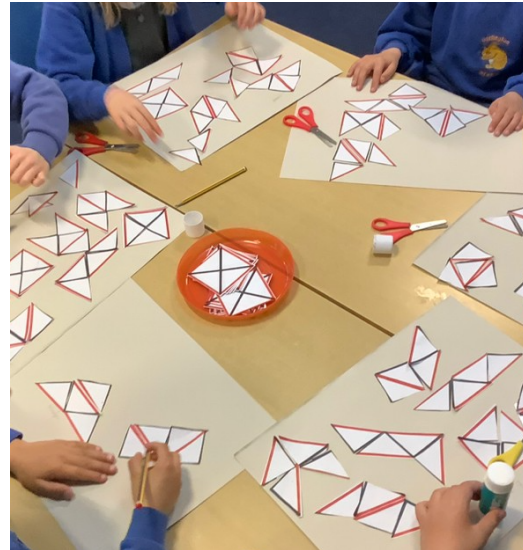

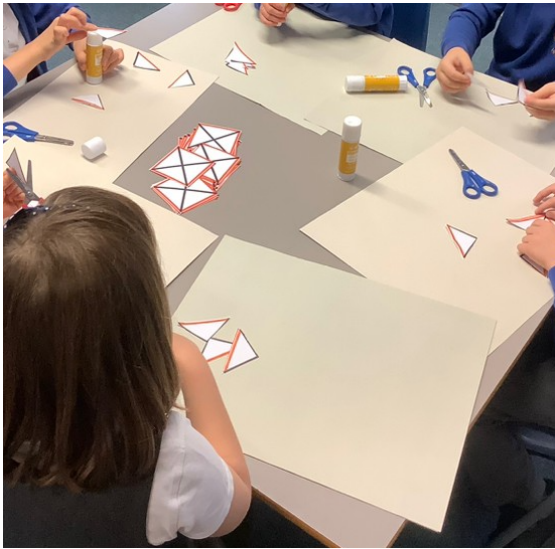

At Burlington we enjoyed our annual Maths Day. This year we based all our learning around the book *Walter's Wonderful Web*, which is about a spider who is desperate to make different shaped webs and has to keep persevering.

Throughout the school we did a variety of maths activities. In EYFS the children developed their shape knowledge and even made a spider puppet. All the children made sure the spiders had the correct number of legs.

In Key stage 1 the children had to solve a tricky maths puzzle. They were given 4 triangles and had to create as many different shapes as they could. There were special rules the children had to follow so it was harder than it first seemed.

The KS1 children also learnt about how shapes can feature in Art. The year 1 children were inspired by looking at famous art work and created their own art by overlapping shapes. In year 2 the children explored using 3d shapes to create shape pictures.
