Burlington's Science Selfie Challenge

When doing his science homework, this boy found that folding creases into the paper made for a much stronger bridge.

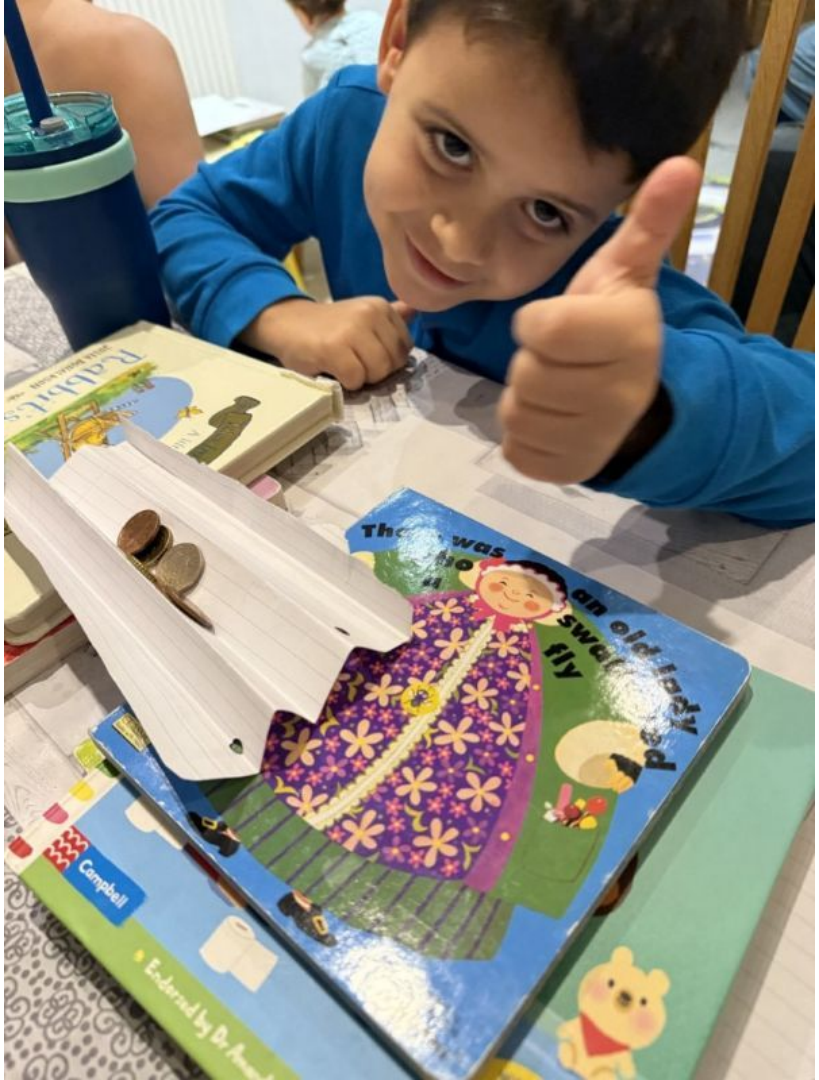

This girl made a paper bridge and observed how many figures could cross the bridge. She found out that the thicker the bridge is, the more figures can cross!

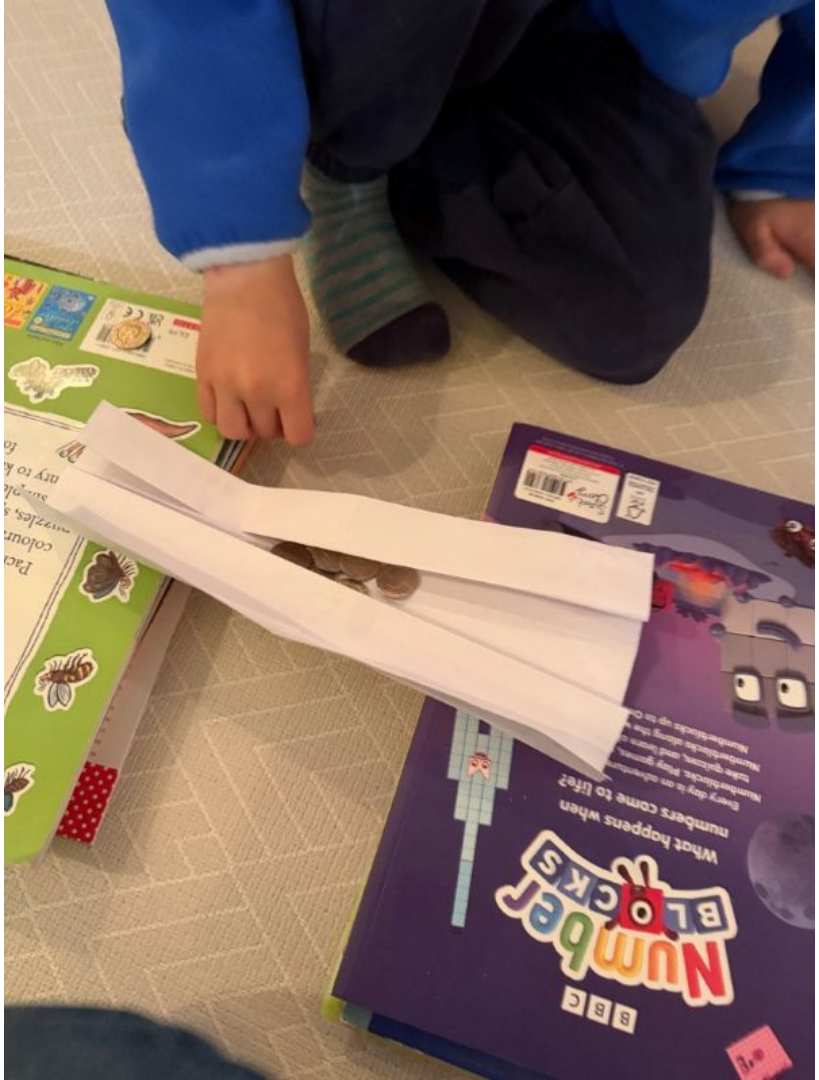

This boy loved taking home one of our Science Whizz Bags and particulary enjoyed completing the jigsaw puzzle and reading the books all about the human body.

This boy’s flat paper bridge was not very strong but his folded paper bridge held more coins. He learned that folding paper can make it stronger and hold more coins.

These brothers built bridges using different folds of paper, here are their results - 3 coins on a single sheet, 4 coins on a folded sheet, 9 coins on a bridge sheet, 15 coins on a triangular sheet and 40 coins on a combined bridge and triangular sheet!

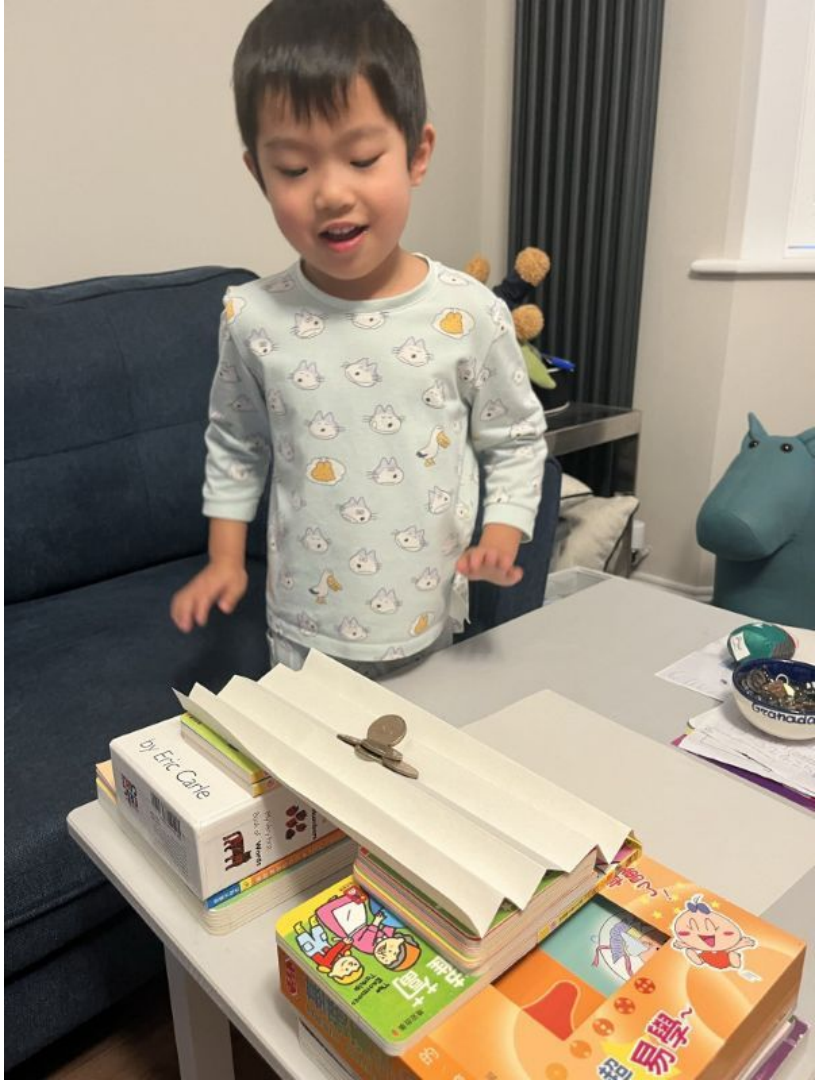

This boy built paper bridges experimenting with different structures. He started with a single sheet of paper which couldn't hold more than a single coin. He then folded the edges several times and realised the bridge could hold way more coins that way.

This girl really enjoyed doing the science homework this term and had fun using Chatterpix to explain her experiment.

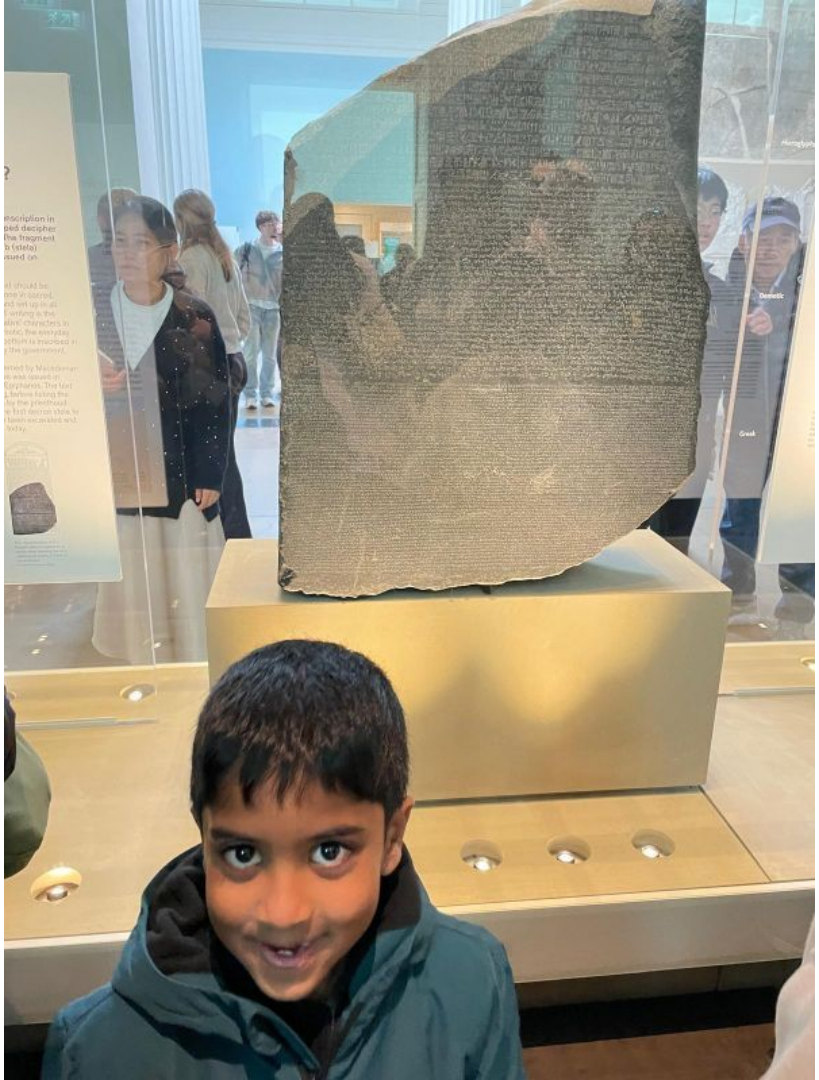

This boy designed three bridges to test out their capability of holding coins. The first one with a flattened design was found as the weakest, while the last one with the trianglar design worked the best.

This girl loved trying out all different types of paper bridges for her science homework and even predicted that a paper fan shape would work best before she even watched the video!

This boy visited the British museum and was particularly excited to see the Rosetta stone and understand how scientists had used it to help understand hieroglyphics!

This boy really enjoyed the science experience to determine how to make the strongest bridge with a piece of paper. He couldn't believe how many toys it could hold when it had a lot of folds!

This girl found so many different colours of leaves in Beverley Park that she decided to make them into a rainbow!

This girl made this amazing picture of a hamburger using leaves she had collected. Well done!

This boy drew this beautiful tree and used real leaves he had collected. We love the autumnal colours!

This boy made these amazing pictures using different coloured leaves. Well done!

This girl drew this picture and used real leaves she had collected for the tree. Well done!

This boy collected some leaves in Nonsuch Park over the weekend and he made a lion with his favourite ones. Well done!

This girl made this beautiful picture of a squirrel and woodland from all the leaves she collected. Well done!

This boy collected some leaves on the way home from the park and made these lovely bugs with the help of his brother. Well done!
